

DWA_04.3 Knowledge Check_DWA4

1. Select three rules from the Airbnb Style Guide that you find **useful** and explain why.

Modules: I never knew there were so many ways to import and export files and modules shows me how to use it and also shows the mistakes people can make.

Destructuring: Destructuring saves you from creating temporary references for those properties, and from repetitive access of the object. Destructuring objects also provides a single site of definition of the object structure that is used in the block, rather than requiring reading the entire block to determine what is used.

Hoisting: It allows me to declare a variable after it was used, this could prove problematic in future as it can confuse the developer.

2. Select three rules from the Airbnb Style Guide that you find **confusing** and explain why.

Accessors: I never heard of this before so I'm unfamiliar with it. It is basically the setters and getters you use in code.

Events: I would always get confused with the different types of functions
.Definition: when attaching data payloads to events pass an object literal instead of a raw value. This allows a subsequent contributor to add more data to the event payload without finding and updating every handler for the event.

jQuery: I just don't recognize anything being done when using jQuery.
